

Power Whip Deployments

The operation of today's data center is more critical than ever. Whether you operate an enterprise, colocation, or hyperscale facility, the ongoing challenge is the same: you have to do more with less. And you have to get it right the first time.

Critical Coordination is a mission critical systems integrator whose sole focus is on managing and implementing data center rack and power projects. Through standardization and best practices, we help you execute move, add, and change projects, whether you manage one or multiple facilities.

Our job is to reduce cost in areas you take for granted, and to reduce the amount of time you spend trying to get them done.

Here's how that works.

Whip deployments are the low hanging fruit in your effort to control ongoing data center costs. Critical Coordination can save you money because we know the difference between what you are paying and what you should be paying.

Is it possible to complete more work for less money and get better results? At Critical Coordination, we think you can. We pay our own way through the savings we create.

Whip deployments can be simpler and easier. Let us prove our value by showing you how.

OUR APPROACH IS TO PROVIDE TRANSPARENCY AND VISIBILITY AT ALL LEVELS:

- We provide you a price list with your cost for the material and labor that goes into installing a whip so you know how much you will be paying, each and every time.
- We work with existing contractors to complete the work; we don't replace relationships, just right-size and manage them.
- We provide resource coordination so that you can focus your attention on the mission of your data center.
- We provide consistency across your data center portfolio by standardizing on both pricing and methodology from site to site.

PRICE TRANSPARENCY

MATERIAL PROCUREMENT

TASK VISIBILITY

PROJECT INTEGRITY

REDUCED IMPLEMENTATION COSTS

OUR VALUE
